

Backend Database Names For Custom Fields🔗

1. Go to Admin > Settings in the main navigation menu
2. Go to the custom field section, select a field type from the drop-down, and then click on **Go**.

The screenshot shows the 'Settings' page with a sidebar on the left. The 'Custom Fields' section is active, indicated by a green highlight in the sidebar. Below the 'Custom Fields' heading, there is a form with the label 'Set up custom fields for:'. A dropdown menu is set to 'Contact'. To the right of the dropdown is a 'Go' button with a hand cursor icon pointing at it. Below this, the 'Company Info' section is visible, with a 'Company' field containing 'The 19th Green' and a 'Tax ID' field with a help icon.

3. Click on the **View the field database names (for the API)** link.

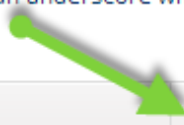

The screenshot shows the 'Contact Record' page. It includes a header and a table of custom fields. Above the table, there is a link 'View the field database names (for the API)' with a hand cursor icon pointing at it. The table has two visible rows. The first row has buttons '(Edit) (Delete)' and a downward arrow. The second row has a button '(Edit)' and an upward arrow.

4. The database field names will be listed in a new window.

Custom Field Details for the Contact Record

NOTE: You must prepend custom field database names with an underscore when accessing them through
EXAMPLE: `_SomeField`

Label	Type	Database Name
Currency	Currency	fhj
Date	Date	Date
Date/Time	Date/Time	DateTime
