# July Update 2018 | Classic Infusionsoft🔗

Content Risk Services

Over the next several weeks, we will release built-in functionality to help you avoid triggering spam filters when sending an email broadcast. Certain keywords can trigger these filters, which send your email straight to your contact's junk folder, where it sits unread. Now you can check your emails for these keywords by clicking the "Spam" icon in the email builder. These keywords will also be flagged when you click "Review and send" before sending your email. Click here to see how!
